For native English-speakers (as well as for those counting above 99 in Latin), reading the ciphers involves the following mental gymnastics:

```

    tens      →      units
    ↙
thousands  →      hundreds
    
```

STANDARD CISTERNIAN

1	2	3	4	5	6	7	8	9

1000	2000	3000	4000	5000	6000	7000	8000	9000

and combinations are formed by adding the appropriate appendages, thus:

1323	4567	5781	8956	9239

The arrangement of the appendages for the units (U), tens (T), hundreds (H) and thousands (K) is:

U	H
T	K

TOLKIENS SCRIPTS

These scripts were invented by J. R. R. Tolkien and appear in his novels *The Hobbit*, *The Lord of the Rings* and *The Silmarillion*. Tolkien's Tengwar script was originally designed to write the Elvish languages Quenya and Sindarin, but has been adapted to write quite a few other languages.

Het Hebreeuws wordt van rechts naar links geschreven, in plaats van het Nederlands dat van links naar rechts geschreven wordt.

Het Hebreeuwse alfabet heeft geen klinkers.

Het Hebreeuws heeft een alfabetisch getal systeem: dit systeem kent geen symbool voor nul, en de letterwaarde van de individuele letters worden opgeteld. Elk cijfer (1, 2, ..., 9) wordt weergegeven door een aparte letter, elk tiental (10, 20, ..., 90) door een aparte letter, en elk honderdtal (100, 200, ..., 900) een aparte letter.

Dit systeem van Hebreeuwse cijfers wordt vooral gebruikt in het oudere Hebreeuws. In het modern Hebreeuws maakt men meestal gebruik van cijfers uit het decimale systeem.

Het additieve karakter van het systeem kan worden geïllustreerd aan het voorbeeld voor het getal 177, dat kan worden weergegeven als טזק wat overeenkomt met $100 + 70 + 7 = 177$.

De getallen 15 en 16 worden weergegeven als respectievelijk טו (=9+6) en טז (=9+7), in plaats van יה' en יו'. De laatste, meer voor de hand liggende combinatie wordt niet gebruikt om een letterreeks te vermijden die deel uitmaakt van de naam van God volgens het jodendom.

MASON CIPHERS

1 2 3 4 5 6 7 8 9 10 11 12 13

A point placed within each gives thirteen more, thus :

1 2 3 4 5 6 7 8 9 10 11 12 13

Making a total of twenty-six, equal to the number of letters in the English alphabet.

There are two ways, at least, of combining and using these characters for the purposes of secret correspondence. One method is to call the first sign, a; the same, with a point, b, etc. Another is to apply them, in their regular course, to the first half of the alphabet, a, b, and so on, to m; after which, repeat them with a dot, beginning with n, o, etc., to z.

The alphabet, according to the first method, stands thus :

a b c d e f g h i j k l m

n o p q r s t u v w x y z

According to the second method, thus :

a b c d e f g h i j k l m

n o p q r s t u v w x y z

SECTION AND PLATOON FIELD SIGNALS

Field signals give a means of conversing silently. They should be used whenever possible, and should be practised constantly. Before a signal is given the attention of the platoon or section must be attracted. Here are four possible methods:

1. Single whistle blast (during fire contact only).
2. Snapping forefinger and thumb.
3. Knocking rifle butt with knuckles.
4. Silent whistle.
